

Differential expression after Notch2 deletion

Public GRCm38 counts | 3 biological samples per condition | CKO relative to wild type

A Expression abundance and effect size

B Genome-wide statistical evidence

Unshrunk model estimates. Color: FDR < 0.05; dotted lines: $|\log_2 \text{fold change}| = 1$.
Missing adjusted P-values are omitted from panel B. Effect-size cutoffs are descriptive, not threshold tests.
